Regional Workshop

“Enhancing Smallholder Plantations Towards Quality Timber Production of Teak and Other Economic Species and Carbon Neutrality in the Tropics”

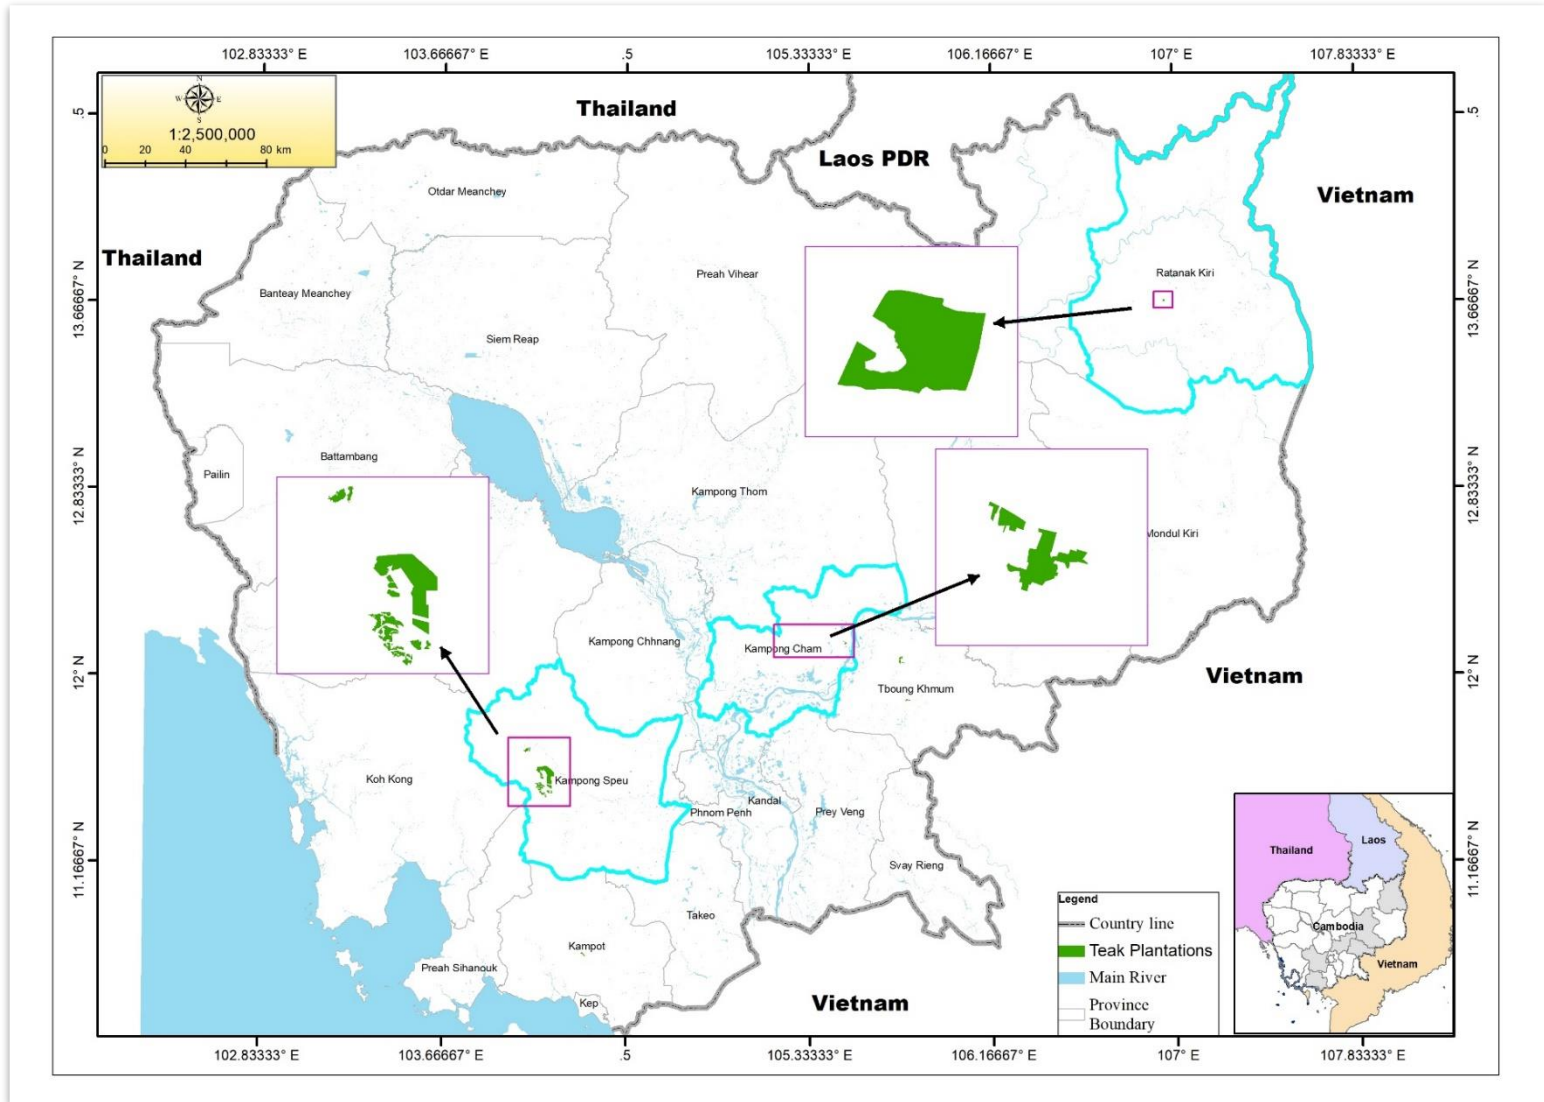

ITTO Project: PP-A/54-331A-Cambodia component

Bangkok, 18 September 2024

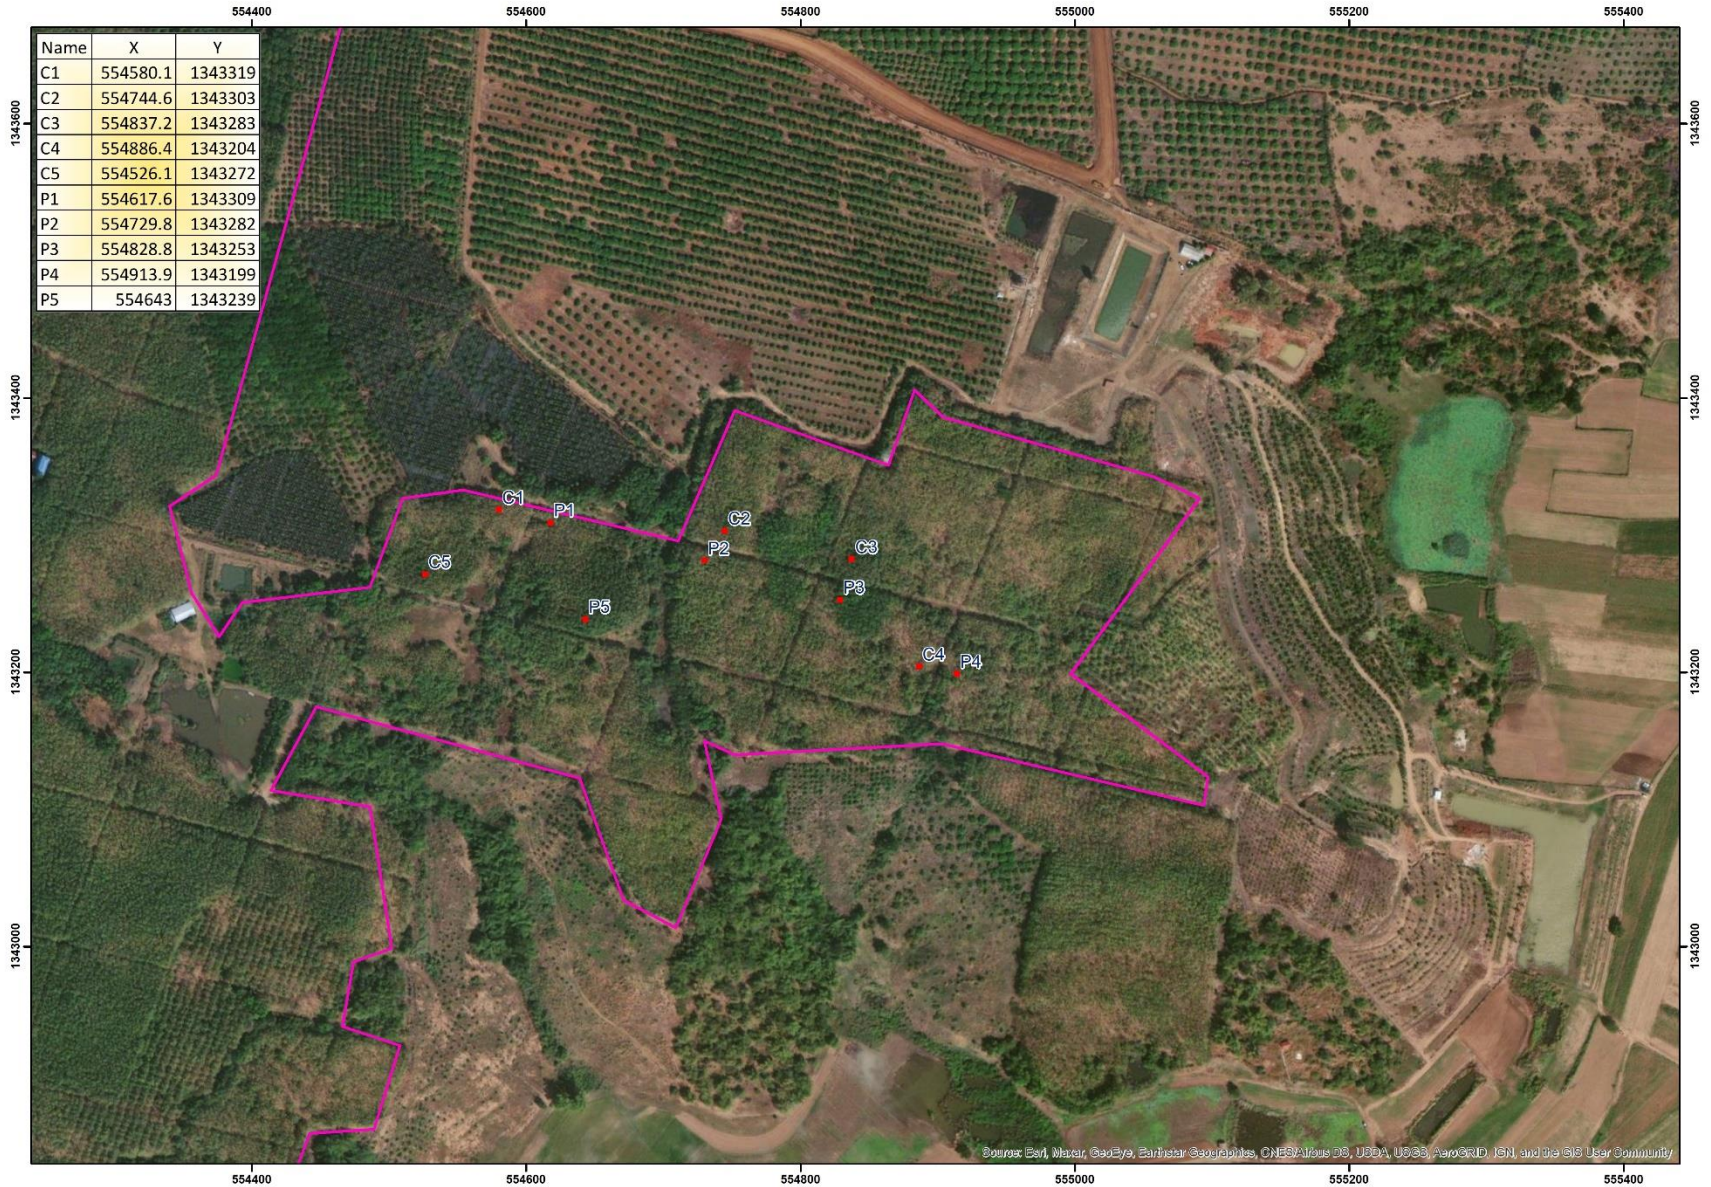

ITTO Teak Project in Mekong

Target Areas

Support smallholders and local communities for improved management of existing demonstration plots for teak and other valuable species and field training

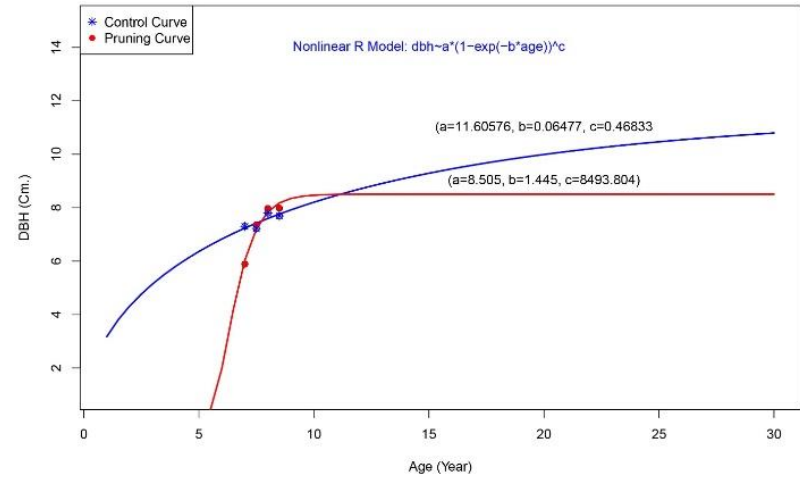

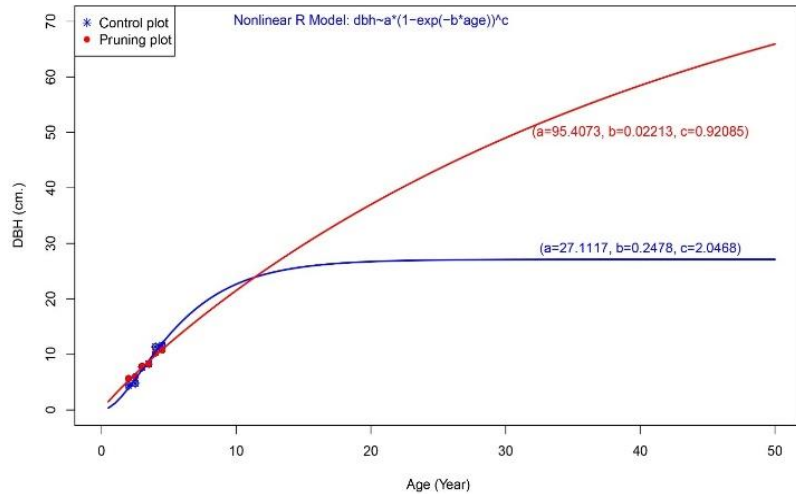

Demonstration Plots in Kampong Cham Province

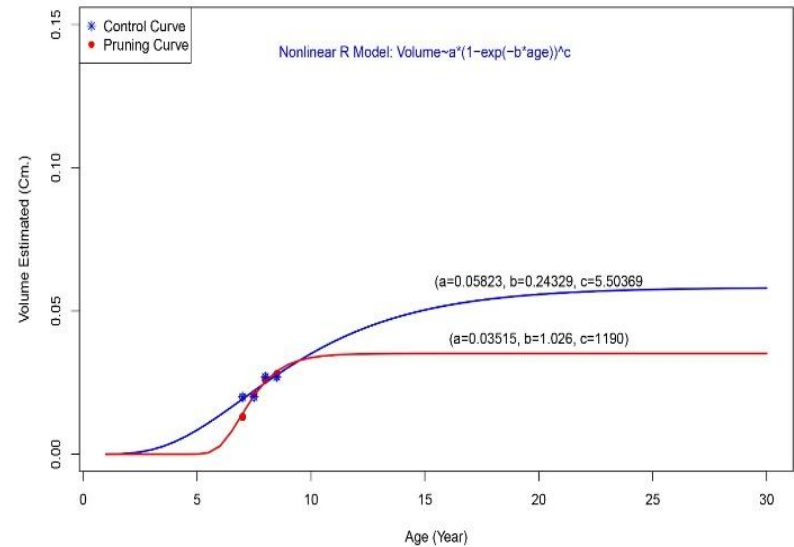

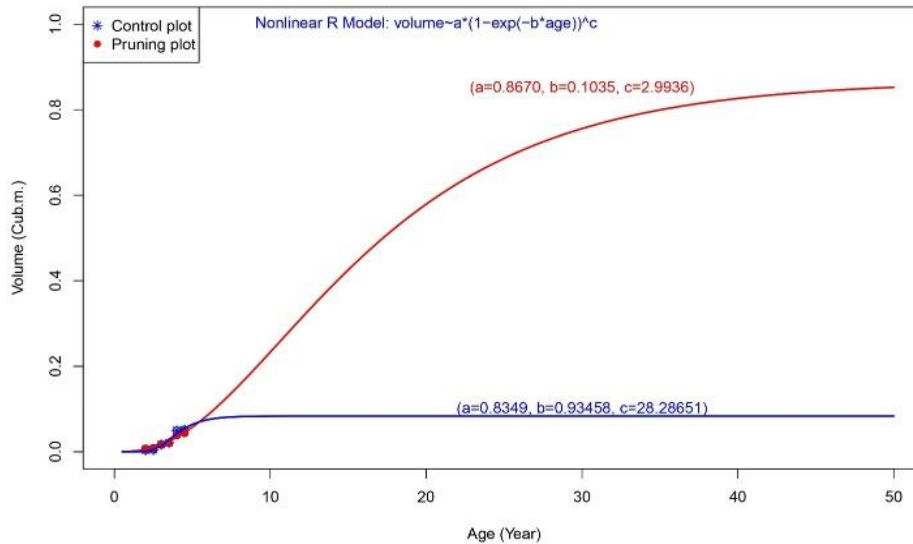

Results from previous phase

The estimation of teak DBH growth (Kampong Speu & Kampong Cham province)

The estimation of Volume

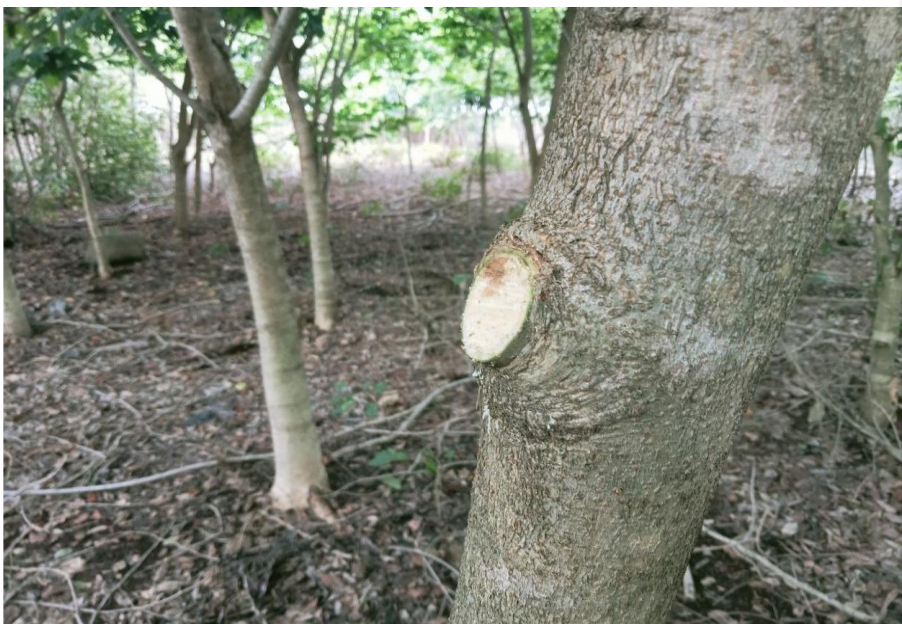

Establish demonstration plots of teak and other valuable species

Measurements of teak demonstration plots
in Kampong Cham province

Establish demonstration plots of teak and other valuable species

Demonstration plots of other valuable species in Kampong SCham province

Seed Production and Silvicultural Practices

The Technical Guidelines on Nursery Techniques and Silvicultural Practices to Improve Stand Management in Cambodia (Khmer version) has been drafted, and the key contents cover:

- ⇒ Chapter I: Introduction (background, objectives..)
- ⇒ Chapter 2: Nursery Techniques
- ⇒ Chapter 3: Establishment of Tree Plantation
- ⇒ Chapter 4: Techniques for Silvicultural Practices

រដ្ឋបាលព្រៃឈើ និងអង្គការ UNEP
Forestry Administration and UNEP

Key contents:

- ⇒ An introduction to forest resources in Cambodia;
- ⇒ CITES conventions and its restricted practices for international trade of endangered tree species;
- ⇒ Current status of key selected tree species in Cambodia;

ITTO Teak Project in Mekong

Promotion of Timber legality and sustainability

Key contents:

- ⇒ Alternatives to illegal logging (other hardwood, teak and fast-growing tree plantation can be substituted for rosewood hardwood products);
- ⇒ The practices with responsible purchasing and contribution to preventing illegal logging;
- ⇒ Promoting of establishment of private forest plantation (rosewood and agarwood) for ex situ conservation)
- ⇒ The Global Rise of Teakwood.

Ways Forward

- The Cambodian project has been conducting a case study on teak efficient processing, teak product designs, and economic analysis;
- Conduct trainings for smallholders for seed production and silvicultural practices;
- Support the data collection for conducting study on Financing schemes for quality timber production in smallholders and community-based teak and other species plantations, and timber legal compliance in smallholder/ community plantations.
